## Approved For Release 2001/03/16 CIA-RDP61-00901A000200020013-3

13. RECOMEND THAT THE PRESENT T/O IN EXECUTIVE REGISTRY BE REQUEED BY ONE POSITION (FROM EIGHT TO SEVEN) AND THAT FURDING VACANCIES BE FILLED BY EXPERIENCED REPLOYESS FROM OTHER CIA BEDISTRIES.

A study of the workload (Attachment A) shows that the number of items registered in Brachtive Registry has decreased by 156 since 1955. During the same poriod, the ca-board strength has decreased by 16 2/35 for other than courier personnel without creating a serious backlog. Assuming that the original 7/0 or staff was adequate, this indicates that the present on-board strength (7) is adequate for the expected workload in the fore-secable future. Therefore, the official 7/0 may safely be reduced by one position (8 to 7).

Accurate and speedy management of mail at the Agency's highest organizational leval is essential. Errors or delays in receiving, controlling, dispatching, or finding the mail could cause unsecessary emberrassment to the Director or his Staff. Therefore, Essentive Registry positions should be staffed with the best qualified employees available from the Agency's many mail and registry units. Agency employees who are emperished in mail room activities and who have a good knowledge of Agency organization and functions should be selected in preference to inexperienced and possibly immature recruits who may be assigned to this important function on their first assignment in the Agency. The Essentive Registry should not be a training ground for new clerks.
